SKILLS

- Python/PyTorch
- Multi-node distributed training
- Slurm clusters

LANGUAGES

- Japanese
- English

EDUCATION

Master of Computer Science
The University of Tokyo

2024 - PRESENT

Bachelor of Computer Science
The University of Tokyo

2019 - 2023

HACKATHON

Fujitsu Special Award
AI Buildathon by
Inception Studio

2024

Second Prize
UGIP SoftBank GenAI
Hackathon

2025

PROFILE

I am a master student at The University of Tokyo in Japan. I finished my bachelor's degree of information science at the University of Tokyo under the supervision of Prof. Issei Sato in September 2023.

My research interests are in the fields of computer vision, 3D world understanding, generative models, and statistical machine learning.

RESEARCH EXPERIENCE

A*STAR

Nov. 2025 - PRESENT

Visiting Student with Dr. Xu

- Working on diffusion unlearning

EPFL

Jul. 2024 - PRESENT

Summer@EPFL with Prof. Amir

- Developing transformer pretrained model for 3D modalities by masked token prediction.
- Trained VQ-VAE style tokenizers for LRM-triplane and Gaussian Splatter Images.

KAUST

Sep. 2023 - Mar. 2024

Visiting Student Research Program with Prof. Bernard

- Developing an efficient token-dropping method in Video MAE utilizing motion vectors from H.264 compression for faster computation and less GPU memory usage.

Albert Inc.

Aug. 2021 - Jul. 2022

Research Intern

- Developed a novel approach for surface reconstruction in noisy point cloud environments using energy-based generative models, enhancing robustness.

PAPERS

FairT2I: Mitigating Social Bias in Text-to-Image Generation via Large Language Model-Assisted Detection and Attribute Rebalancing

arXiv

2025

Surface Reconstruction from Raw Point Cloud via Energy-Based Models

The 36th Annual Conference of the Japanese Society for
Artificial Intelligence

2022

GRANT

World-leading Innovative Graduate Study Program Co-designing
Future Society.

The University of Tokyo

Oct. 2024 - PRESENT
